

# Clarizen for JIRA

A PMI study on project cost over-runs and other business issues reported that companies waste more than \$120 million for every billion dollars in project spending.<sup>1</sup> Research also shows that projects go over-budget and teams lose efficiency when they are not aligned, do not have clear goals and are not properly communicating or sharing the same accurate data.<sup>2</sup>

For companies that use and rely on JIRA, one of the biggest sources of misalignment results from engineering, IT managers and stakeholders outside of JIRA is not having a complete view of what their teams are doing inside of JIRA. Without real-time reporting and a full view into resources and project data, it's difficult or even impossible to know the full status of teams and projects.

Focus is lost and managers struggle to track progress against plan, scope or against resource requirements—and are forced to do it manually elsewhere. As a result, serious issues appear such as:

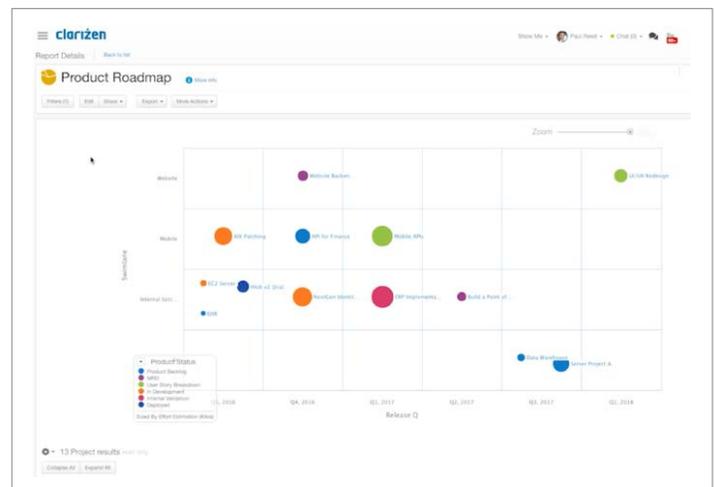

- Duplication of information due to a lack of integration between tools
- Inability to visualize project health and progress across the portfolio in real-time
- Limited collaboration and no alignment between teams.

## USING CLARIZEN FOR JIRA

- ✓ Gather a 360° view of projects for real-time insights and agility
- ✓ Automate workflows and collaborate across teams
- ✓ Manage work as a lifecycle to streamline work execution

## Enter Clarizen

By integrating JIRA with Clarizen's full-featured work management solution, companies are discovering a better way to align formerly siloed project activity and integrate multiple instances of JIRA to streamline and centralize project planning, visibility and reporting. In other words, Clarizen's JIRA integration gives all project stakeholders visibility and alignment, including teams outside of engineering not working in JIRA.

## Enter Clarizen (cont.)

### Project and portfolio planning

Clarizen embraces the full scope of customer implementations and ongoing maintenance. As a result, instead of juggling various ad hoc systems and disparate tools, organizations can take total control of everything that matters, as it happens: project management, change requests, financial reporting, business processes on a single, intuitive cloud-based solution.

### Cross-team visibility and alignment

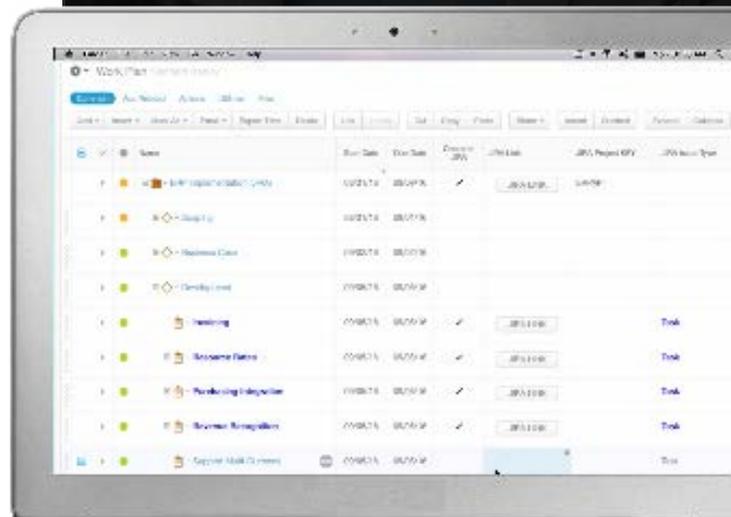

Clarizen centralizes all data and activities, and associates them with the appropriate project or request. It gives you real-time status on project success so you will instantly know which projects are succeeding and which are at risk. You can also immediately identify and respond to resource overloads or under-utilization.

### Automated workflows

PMOs typically have multiple systems in the environment, and they all must work together to support project and portfolio success. Clarizen seamlessly integrates with class-leading solutions. The end result is a “single source of truth” that individuals and teams can access anytime and anywhere to make smarter, faster decisions. Everyone is then operating on “good data” and is aligned as well.

To learn more about Clarizen’s integration with JIRA can work with your project management, engineering and IT teams, contact [sales@clarizen.com](mailto:sales@clarizen.com) or visit [www.clarizen.com/jira](http://www.clarizen.com/jira).

Clarizen’s JIRA integration gives all project stakeholders visibility and alignment, including teams outside of engineering not working in JIRA

## ABOUT CLARIZEN

Clarizen is a collaborative work management solution designed for people who value their time, and for organizations that value cross-company engagement. Built on a secure, scalable platform, Clarizen brings together project management, configurable workflow automation and in-context collaboration to create a meaningful engagement experience that allows everyone to work the way they work best.
